Structure. The electromagnetic field may be viewed in two distinct ways: a continuous structure or a discrete structure. Continuous structure. Classically, electric and magnetic fields are thought of as being produced by smooth motions of charged objects.

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

An international working group of scientists, researchers and public health policy professionals (The BioInitiative Working Group) has released its report on electromagnetic fields (EMF) and health. They document serious scientific concerns about current limits regulating how much EMF is allowable from power lines, cell phones, and many other sources of EMF exposure in daily life.

Context - Because electricity is so much a part of our lives, there are electromagnetic fields (EMF) around us most of the time. Overhead power lines, wiring in buildings and electrical appliances generate "Extremely Low Frequency" (ELF) electromagnetic fields.

Electromagnetic Hypersensitivity (EHS) is the medical term for a set of health symptoms whose cause is electrically based. It is also called Electrical Sensitivity (ES), EMF injured, Microwave or Radiation Sickness, and other names. Vested industry interests are trying to control the public's perception of EHS on Wikipedia by calling EHS pseudoscience, which is false, and harmful to people ...
