The first thing to know is that most cross stitchers, and certainly all commercial designers, create their charts using a standard 10-square grid. This means that you will see a bold line, every 10 squares, both vertically and horizontally. These bold lines are there to make it easy for you to calculate the size of a design.

Graph-based diagrams. These diagrams present statistical data graphically. The most common among these are the bar graph, line graph, histogram, and pie chart. An advantage of using graphs is that they can show changes over time or a comparison of numbers much more clearly than a data table can do.

Graphics (from Greek $\gamma\rho\alpha\phi\iota\kappa\omicron\varsigma$, graphikos, "belonging to drawing") are visual images or designs on some surface, such as a wall, canvas, screen, paper, or stone to inform, illustrate, or entertain. In contemporary usage it includes: a pictorial representation of data, as in computer-aided design and manufacture, in typesetting and the graphic arts, and in educational and recreational ...

In computing, a graph database (GDB) is a database that uses graph structures for semantic queries with nodes, edges and properties to represent and store data. A key concept of the system is the graph (or edge or relationship), which directly relates data items in the store. The relationships allow data in the store to be linked together directly, and in many cases retrieved with one operation.
