

electromagnetic waveguides - kfupm - some argue that waveguide is not a transmission line as it doesn't have two conductors. there are different types of waveguide depending upon the type of wave to be guided [2]. for example: electromagnetic waveguides, optical waveguides, acoustic waveguides etc. ii. history in 1893, sir j. j. thomson proposed the first waveguide [3]. **8.14 problems waveguides - ecetgers** - waveguides are used to transfer electromagnetic power efficiently from one point in space to another. some common guiding structures are shown in the figure below. these include the typical coaxial cable, the two-wire and microstrip transmission lines, hollow conducting waveguides, and optical fibers.
